

Thevenel Joazard

Software Engineering Student | Software Engineer Apprentice

Lille, France | +33 7 50 09 26 71 | thevenel25@gmail.com | linkedin.com/in/thevenel-joazard | thev-academy.com

Education

IMT Nord Europe

Engineering Degree in Computer Science

Lille, France

Sep 2025 – Sep 2028

Expected graduation: 09/28. Relevant coursework: Data Structures and Algorithms, Object-Oriented

Programming, Networks, Mathematics, Data Science.

Université de Lille

French Bachelor's Degree in Computer Science (BUT Informatique)

Lille, France

Sep 2024 – Jun 2025

Specialization in application design, development and validation; coursework in Java, Jakarta EE, Spring Boot, databases and software engineering.

Johannes Gutenberg University Mainz

Erasmus Exchange Programme in Computer Science

Mainz, Germany

Oct 2023 – Aug 2024

Coursework in declarative programming, advanced databases, artificial intelligence and project management.

Experience

Malakoff Humanis

Software Engineer Apprentice

Guyancourt, France

Sep 2025 – Present

- Develop and maintain Java 21 and Spring Batch workflows using reader, processor, writer and decider components, backed by MariaDB and SQL.
- Deliver end-to-end enhancements for reporting, operational reporting and communication workflows, from requirements and data transformations through testing and integration.
- Contribute to the migration of SAS processing workflows to a shared Java architecture; analyze a legacy PHP production-supervision application and document development and maintenance practices.

Thales

DevSecOps Intern

Lambersart, France

Mar 2025 – Jun 2025

- Built a Python tool delivered as a CLI, FastAPI REST API and reusable package to generate and audit firewall configuration matrices.
- Reduced a manual process from approximately five days to under 2.5 seconds.
- Achieved 84% automated test coverage, a 9.70/10 Pylint score and zero Bandit findings; integrated Jenkins, Docker, SonarQube and Artifactory and authored Sphinx documentation.

Extramus.eu

Full-Stack Developer Intern

Terranova di Sibari, Italy

May 2023 – Sep 2023

- Designed a multilingual booking application with a React single-page frontend and Laravel REST API; modelled the database and defined functional requirements.
- Implemented authentication, role-based access and booking workflows, and produced multilingual technical and user documentation within an international team.

Selected Projects

Java Ray Tracer

Built a 3D renderer from scratch with scene parsing, Lambert and Blinn-Phong shading, shadows, reflections, BVH acceleration, PNG export and more than 80% test coverage.

Java, Algorithms, Testing

RV32I RISC-V Emulator

Implemented binary loading, instruction decoding, step-by-step execution, register and memory management, structured error handling and automated tests.

Rust, Systems Programming

Gacha Game Microservices

Designed authentication and player services in a four-person team using REST APIs, separate databases, OpenFeign communication and an Angular frontend.

Java, Spring Boot, PostgreSQL, Docker

Leadership and Open Source

- Contribute to French translations of Python documentation and presented a Wagtail-related talk at PyConFR.
- Create technology education content in Haitian Creole for an online community of approximately 4,000 subscribers.

Technical Skills

Languages: Java, Python, Rust, JavaScript, TypeScript, SQL, Bash

Frameworks and data: Spring Boot, Spring Batch, FastAPI, Django, React, Angular, PostgreSQL, MariaDB, MySQL, MongoDB

Engineering: Data structures and algorithms, object-oriented design, REST APIs, microservices, automated testing, CI/CD, Git, Linux, Docker, Jenkins, SonarQube

Spoken languages: Haitian Creole, French, English (C1), German (B2), Spanish (B2)
